

## **British Stainless Steel Association and The Nickel Institute**

### **CPD SEMINARS**

#### **1. Stainless Steel for Architects**

A general introduction to stainless steel for architects, including grades, standards and surface finishes, including the properties of stainless steel, EN 10088 specifications, modern surface finishes, environmental benefits and where to obtain further advice.

#### **2. Designing Building Exteriors in Stainless Steel**

Designed to help architects get the best out of stainless steel in the design of building exteriors, and to avoid practical problems that would give disappointing service or performance, including issues affecting material selection and long-term maintenance.

#### **3. Specifying Stainless Steel for Architectural Applications**

Provides architects with practical guidance on the specification of stainless steels, including material grade, surface finish and flatness criteria, and factors influencing the cost of different specifications.

#### **4. Stainless Steel in Swimming Pools**

Provides architects and structural engineers with guidance on the use of stainless steels in swimming pool applications; outlines the principles of good design and material selection, and how to avoid pitfalls, such as stress corrosion cracking

### **BOOKING**

To book a seminar, please contact Kate Vale at BSSA:
